# **REGUPOL 7210C**

for screed isolation and resilient overlayment applications

## Technical Data Sheet

#### **PRODUCT DESCRIPTION**

REGUPOL 7210C is a cost-effective rubber bound underscreed material specifically introduced for the PCT (Pre-Completion Test) market for the isolation of all screed types for compliance with Approved Document E Building Regulations (England & Wales) and Section H of the Scottish Building Regulations. It is a versatile resilient material that also has applications as a resilient underlayment.

#### APPLICATION

REGUPOL 7210C is used under all types of floor screeds including:

- New build apartments
- Hotels
- Schools
- Care homes
- Commercial facilities

Recommended for all PCT (Pre-Completion Testing) sites.

REGUPOL 7210C can also be utilised as a resilient underlayment for use under final floor finishes such as:

- · Engineered timber
- Parquet Flooring
- Laminate flooring
- Carpets
- Certain tiles and stone applications

### PHYSICAL INFORMATION

Sheet length	2.25m	
Sheet width	1.15m	
Roll length	10m	
Roll width	1.15m	
Material thickness	5mm standard, 3mm available upon request	

### **TECHNICAL INFORMATION**

Density	720kg/m <sup>3</sup>		
<b>Tensile strength</b> (DIN 53571)	0.5N/mm <sup>2</sup>		
Thermal conductivity	approx 0.14W/mK		
Elongation at break	approx 75%		
Temperature resistance	-40°C to +110°C		
Airborne sound insulation (DnT,w + Ctr)	49dB (mean average)*		
Impact sound insulation (L'nT,w (Ci))	3mm 5mm	50dB*** 46dB (mean average)**	
Impact performance $\triangle$ LW	3mm 5mm	18dB 20dB	

Note: use a perimiter strip when using as an underlayment with Engineered Timber, Parquet Flooring, Tiles and Stone or leave a small gap which must be filled with a flexible sealant.

#### **FEATURES** and **BENEFITS**

- Has been independently tested on-site to show compliance in accordance with Approved Document E and section H of the Building Regulations
- Excellent impact and airborne performance
- Offers long term performance without collapse or "bottoming" out under high point loads

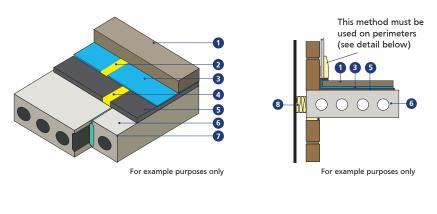

- Minimal creep, even under high loads
- Resistant to ageing and deformation
- · Quick and easy to install
- Minimises construction heights
- High quality and exact material thickness guaranteed
- Suitable for use with underfloor heating
- · Protects expansion joints
- Zero ozone depletion potential (ODP), zero global warming potential (GWP)
- Mildew and moisture resistant
- When used with a sand/cement screed; there is no requirement to use a dpm (please see diagrams)
- Product manufactured using Recycled Materials and 100% recyclable
- Building Regulations Approved Document E requirements 45dB or greater (performance figures obtained from independent testing)
- \*\* Building Regulations Approved Document E requirements 62dB or less
- \*\*\* Site Test 250mm slab, 3mm REGUPOL 7210C, 33mm screed, 20mm Marble NO Ceiling (performance figures obtained from independent testing)

## **TYPICAL INSTALLATION**

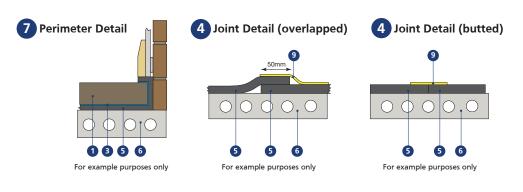

# **REGUPOL 7210C with DPM**

(only applicable where proprietary free flowing screeds are used)

- 2 Taped joint\*
- **3** Min. 500 gauge polythene sheeting
- 4 Joint detail
- 5 REGUPOL 7210C 3/5mm layer
- 6 Pre-cast hollow core
- 7 Perimeter detail
- 8 Acoustic cavity closer
- 9 Hi-tack tape \*DPM overlap to be minimum 100mm

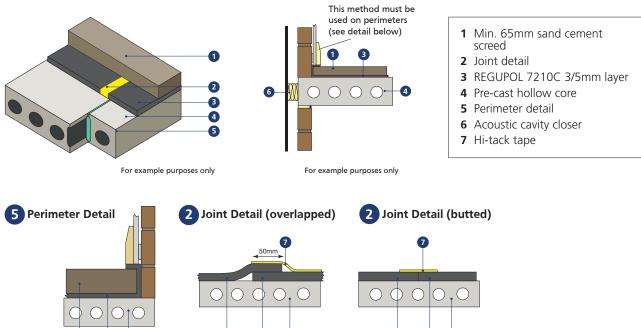

**REGUPOL 7210C without DPM** 

(for use with Sand/Cement Screeds only)

Carpet, engineered timber, parquet flooring, laminates, stone and tiles (ceramic, granite, stone, marble)

REGUPOL 46-101 adhesive for the bonding of engineered timber, laminate flooring, carpet, parquet flooring, tiles and stone

REGUPOL 7210C - see note ii

REGUPOL 43-105 adhesive for the bonding of REGUPOL 7210C to dry concrete and other suitable substrates

Concrete slab (self-levelling screed if required - see note i)

Consult CMS Danskin Acoustics for recommended adhesives

Installation key points:

- Area of installation must be dry, dirt and dust free and weather tight. If over 75% RH seal with suitable primer. To determine RH please use a Hygrometer.
- REGUPOL 7210C should be unwound and left for a minimum 8 hours or ideally overnight at the place where it is to be installed, to allow for any potential shrinkage.
- The subfloor must be sound, smooth and dry. A self-levelling compound may be required to achieve the desired 'SR' value see note iii.
- When bonding to bare concrete a suitable concrete sealer is recommended to ensure maximum adhesive coverage and bond strength.
- When installing timber flooring over REGUPOL 7210C always use a flanking band around the perimiter to reduce impact transmissions into walls.
- When installing ceramic tiles, stone and parquet flooring leave at least a 3mm gap around the perimiter which should be filled with a flexible sealant.

#### Notes:

- CoF (Coefficient of Restitution) for Light Duty Floors (0.55) to comply with the requirements of TTA document entitled 'Ceramic and Natural Stone Flooring to Acoustic Systems to meet the requirements of the Building Regulations Approved Document E Resistance to the passage of sound'.
- ii) Product thickness selected is based on acoustic performance required.
- iii) Impact performance (Delta Lw) was tested under a wood layer on a Heavyweight Standard Floor.
- iv) When using furnishings with high point loads we recommend the use of load spreading furniture cups.

IMPORTANT: Directions for use are given for guidance only and are not intended to form part of any contract. They should be varied or adapted to suit your particular materials or conditions of use. It is strongly recommended that prospective users test a sample of the product under their own conditions to satisfy themselves of its suitability for the intended purpose. For the Pre Completion Testing route to compliance with the Building Regulations CMS Danskin Acoustics may provide site test evidence (where available) concerning the use of their product in a similar overall construction. Test evidence of a product passing minimum standards in one construction is not a warranty or specification that the same product will meet the desired acoustic performance level in any other building. Such evidence can only be considered indicative and should not be relied upon.
